SUMMARY

Highly organized and meticulous **Web developer** with over **1 year** experience in development process. Strong understanding in data structure, OOPS concept with excellent practical programming experience using: JavaScript, React.js, Node.js, MySQL, Rest API, GitHub. **R**esult driven and **C**ollaborative team player with strong focus on **problem-solving** and **analytics** skills also ensuring well **documented** process to drive success.
Best Practices in developing web applications with focus on **usability** and **accessibility** feature to create better user experience.

PROJECTS

Easy Travel   [Live Website](Live%20Website) | [Source Code](Source%20Code)

 Technologies used: Node.js, EJS, CSS, API

* Tourist can make a list of must visit places easily as per their choice for country, province, city and categories. As per their list they see a necessary information they must know before to visit at the same time on search.
* This website creates with 4 different APIs to manipulating API data as per need and to create user friendly website. I use Countries now, google place, google map and weather API in this website.

Type-A-Thon   [Live Website](Live%20Website) | [Source code](Source%20code)

Technologies used: HTML, CSS, JavaScript

* Letters are falling from top to bottom, on Key down Letters are disappearing and adding to the score.
* When anyone letter touch to bottom game will be over and reset the score from 0. Rolling eye image created with the CSS animation.

Mehdi Art   [Live Website](Live%20Website) | [Source code](Source%20code)

Technologies used*:* Node.js, Pug, MongoDB, Express.js

* Mehdi art is common tradition in India, Pakistan, Bangladesh and Afghanistan. This a platform where artist can put their work and contact details and user can find artist easily. In login page artist can create their profile (POST request to mongo dB atlas) and it will be redirect to gallery (filled information GET) and shower their work is uploaded.

Portfolio CMS   [Live Website(React)](Live%20Website(React))|[Source code(Laravel)](Source%20code(Laravel))

Technologies used*:* Laravel, CSS, MVC

* Create portfolio CMS system in Laravel to make easy for navigate portfolio. Create many to many relationships between skill and project use of MVC structure. Use of JSON export create frontend in react.

EDUCATION

Humber College   *Toronto, ON*
